Lighting Kit

Package contents:

- 3 x 15cm Warm White Dot Light
- 1 x 30cm Warm White Dot Light
- 2 x 15cm Blue Dot Light
- 1 x 15cm Flashing Warm White Dot Light
- 5 x Warm White Strip Lights
- 2 x 5cm Connecting Cables
- 3 x 15cm Connecting Cables
- 2 x 30cm Connecting Cables
- 2 x 6-port Expansion Boards
- 1 x Flicker Effects Boards
- 1 x USB Cable

Note:

Place wires on the surface or under the building blocks. The wire can be placed between the building blocks or under the block, but they should be placed between the studs correctly.

Insert the connectors to the ports. Be careful when you are operating, there’s only one correct way to insert, make sure the expansion board is upward, find the soldered “=” sign on the left of the port. When you are inserting, the side which the wires can be seen should be faced to the “=” sign and if you feel hard to insert, please stop, and don’t force it, for that may result in bent pins inside the port or overheating of the expansion board.
At this point, use the tweezers to straighten the bent pins.

When installing dot lights, make sure they are correctly placed (Yellow LED package is exposed). You can put they either on the top of the studs or between studs.

**Connecting cable connectors to Strip Lights**

Take extra care when inserting connectors to ports on the Strip Lights. Connectors can be inserted only one way. With the Strip Light facing up, ensure the side of the connector with the wires exposed is facing down. If a plug won’t fit easily into a port connector, don’t force it. Doing so will damage the plug and the connector.
Finally, please pay attention to the positive and negative terminals of the battery when installing the battery case.
Instructions for installing this kit:

OK, Let’s Begin!
Start from installing lights for the dancing floor at the right side. Separate the dancing floor from the building

Remove the following pieces

Take a warm white 30cm dot light, remove the flame piece

With lighting part facing the flame, place the light inside the following 1x1 round piece, reconnect the flame piece
Remove the wall from the back of the flame to hide the cable as per below

Reconnect the wall, thread the connector through the following gap, reconnect the pieces
